

MAINTENANCE OF WINGITS® SOLID SURFACE PRODUCTS

Acrylic Solid Surface is a homogeneous solid surface with mineral-filled acrylic polymer material that makes maintenance easy. Routine maintenance will give years of carefree service.

SOLID SURFACE

The sanitary properties of solid surface means food, dirt, bacteria, and germs cannot penetrate it. Routine cleaning with soap and water and a sponge, or window cleaner and paper towels will remove most dirt and stains.

For Stubborn Stains: Rub the stain with a scouring cleanser and a burgundy or green-colored Scotch-Brite® pad with water. Always rub in a circular motion, then rinse and towel dry. Rub the entire surface occasionally with the Scotch-Brite® pad to maintain the finish.

For Removing Cuts and Scratches: Sand with 180-grit (120 micron) or 220-grit (60 micron) fine sandpaper until the cut or scratch is removed; restore finish with an abrasive cleanser and a burgundy Scotch-Brite® pad to the same finish as the adjacent surface.

Solid Surface can be easily repaired. However, please use the following guidelines to prevent damage:

Hot Pans and Objects: As with other solid surface materials, WingIts® Solid Surface should be protected from hot pans directly from the stove or oven by the use of hot pads or trivets equipped with rubber-tipped feet.

Stove: Always place a flame-resistant hot pad or trivet underneath a heat-generating appliance such as a crock-pot or electric frying pan.

Chemical Protection: Some strong chemicals can cause damage to your Solid Surface if left in contact very long. Paint removers, oven cleaners, solvents containing methylene chloride or acetone (nail polish remover), acid drain cleaners, toilet bowl cleaners, contact adhesive solvent, rust removers, or lacquer thinners should be flushed with soapy water as quickly as possible, rinsed with clean water and towel dried.

Cutting on Solid Surface: Do not cut directly on a Solid Surface, always use a cutting board.
