

MAINTENANCE OF WINGITS® CULTURED MARBLE PRODUCTS

Cultured marble should be cleaned regularly with a nonabrasive household cleaner like a mild detergent solution or window cleaner.

Avoid using abrasive cleaners and scouring powders.

For removing stubborn stains you can use a nylon scrubber but a metal scrubber should **never** be used as it will scratch the surface.

Ammonia based cleaners should also be avoided.

Deep scratches need professional handling but light scratches can be removed by using a 600 grit sandpaper or hand buffing with a polishing compound.

A final coat of Gel-Gloss or automotive polish will get it sparkling again. For very light scratches only a Gel-Gloss will be enough.

Original factory gel coat can get damaged by deep scratches, excessive scouring and cleaning with abrasive products, as the surface is only a superficial coating and does not go deep into the material.

Damage and discoloration can also be caused by harsh chemicals, sprays and medicines used in the bathroom.

Questions on care, call 1-877-894-6448 or email customerservice@wingits.com for assistance.
