

Care & Maintenance Guide

Solid Surface

WINGITS® products are manufactured from the highest quality materials and engineered to deliver lasting performance in demanding commercial environments. This guide provides simple care recommendations to keep your solid surface accessories looking their best for years to come.

Solid Surface (Corian®)

WINGITS® solid surface components are crafted from premium Corian® and similar acrylic-mineral composite materials, offering a seamless, non-porous surface that resists stains, moisture, and bacteria. Solid surface is inherently hygienic and remarkably easy to maintain, making it ideal for hospitality and healthcare applications.

Routine Care

Wipe with a soft, damp cloth or sponge using warm water and a mild soap or detergent. Rinse and dry. For most day-to-day cleaning, this is all that's required – the non-porous surface prevents dirt and grime from penetrating.

For Stubborn Marks

Matte / Satin finish: Apply a mild abrasive cleanser (such as Soft Scrub® or baking soda paste and water) with a damp sponge or non-scratch pad using a circular motion. Denatured alcohol may also be used with a soft cloth or sponge. Rinse thoroughly and dry.

Gloss / Semi-Gloss finish: Use a non-abrasive cleaner only. Abrasive pads or cleansers will dull a glossy surface. Wipe with a soft cloth, rinse, and dry.

Minor Scratches & Scuffs (Matte/Satin Finish)

One of the unique advantages of solid surface is renewability. Light scratches on matte or satin finishes can often be buffed out with a Scotch-Brite™ pad and a mild abrasive cleanser (ex. baking soda paste and water or

Important Notice

This guide provides general care recommendations for WINGITS® finished products. Always follow the specific instructions provided by the manufacturer of any cleaning product used. WINGITS® assumes no responsibility for damage resulting from the use of unapproved cleaning agents, abrasive materials, or failure to follow these care guidelines. For questions or additional guidance, contact WINGITS® Technical Support at 877-894-6448 or visit wingits.com.

Soft Scrub®) using a circular motion, then rinsed and dried. For deeper scratches, contact WINGITS® Technical Support for refinishing guidance.

Disinfecting

Solid surface can be disinfected with a diluted bleach solution (1-part household bleach to 10-parts water). Do not allow bleach solutions to remain on the surface for extended periods.

What to Avoid

- Strong solvents such as acetone, paint remover, or methylene chloride, which can damage the surface.
- Prolonged exposure to harsh chemicals or undiluted bleach.
- Placing extremely hot items (e.g., curling irons, hot pans) directly on the surface without protection.
- Exposing to sustained direct sunlight in outdoor applications (solid surface is designed for interior use).

General Best Practices

- Always rinse cleaning agents completely and dry the surface to prevent water spots or residue buildup.
- Routine maintenance is the easiest way to keep every finish looking new. Frequency depends on the environment – daily in high-traffic or wet areas, weekly to monthly in typical installations.
